Service Interruptions:

- None reported.

WEATHER OF CONCERN

Weather of Concern

- A pattern shift is in store for Northern California this weekend and it will bring much colder temperatures for next week.
- A weak low pressure system will move through Southern California today. It will bring isolated to scattered light showers across the region except the deserts today into this evening.

Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

Key Points

02/15 – 02/21

Thursday-Saturday

- Gusty offshore winds develop late Thursday night into Friday which could elevate fire weather danger briefly in southern CA.
- Otherwise, no significant weather or water impacts expected.

Sunday-Monday

- Light rain/snow possible for mountains of much of the state, but no significant weather or water impacts expected.

Monday-Wednesday

- Below normal temperatures statewide, with the lower temperatures expected in the northern half of CA.
- Valley frost/freeze issues possible overnight Mon and Tues.

California OES Impact Threat Matrix

February 15 – 21, 2018

DAY/THREAT	THU	FRI	SAT	SUN	MON	TUE	WED
Fire Weather							
Winds	Offshore Srn CA	Offshore Srn CA					
Cold					Mostly Nrn CA	Mostly Nrn CA	Mostly Nrn CA
Snow							
Heavy Rain/ Flash Flooding							
River Flooding							
Severe Weather							
Heat							

	High Threat
	Moderate Threat
	Slight Threat
	No Discernible Threat

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

Atmospheric pattern looks to be consistent with a dominant ridge off the coast and inside slider like systems rotating around the ridge and providing impact periods to Northern California. System passage timing is a little more suspect next week but the overall weather pattern looks to be modeled well. Expect periods of light precipitation favoring the north and east and moderate wind flow episodes.

The next Pacific trough will slide over the area today and tonight. Light precipitation will break out across the far north during the afternoon and slide eastward during the overnight hours. A few spots may pick up between 0.1 to 0.2 liquid water amounts but very localized. Gusty southwest winds will develop this afternoon and favor the higher peaks found across the north and east. Peak gusts to 35 mph possible then. The wind flow will transition to a northerly one tonight with moderate gusts lasting through Thursday into Thursday night. Humidity values will be lower on Thursday with a few teens in the Sacramento Valley possible.

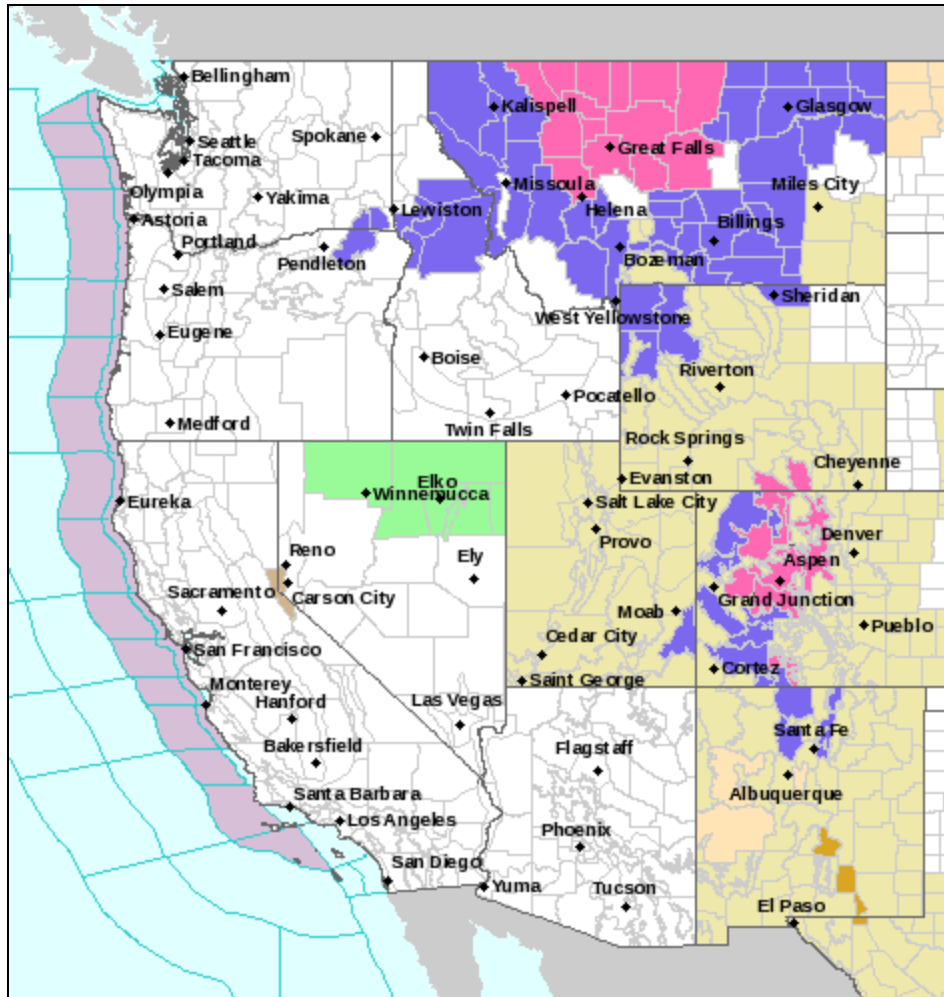

Ridging will occur on Friday and lead to light winds and warmer temperatures. Humidity values will remain consistent with some teens possible in the Valley. The ridge will begin to break down during the weekend due to another inside slider system but a stronger break down should occur by the middle of next week. Regardless of the timing of the storm systems, temperatures will trend much cooler and become cooler than normal. Some precipitation is expected during this period favoring the far north and east, but amounts once again would be light. A northerly wind flow looks to be dominant during the earlier half of next week.

SOUTHERN CALIFORNIA

A Pacific trough dropping down the West Coast will push a low pressure area centered off the Southern California Coast inland today. Scattered showers with less than a quarter inch of rainfall will move across Southern California into Thursday morning. The snow level will be around 6,000 feet. Temperatures will remain near normal through Thursday, with 40s to low 50s across the mountains and upper 50s and 60s in the valleys. Temperatures will warm 5 to 10 degrees and minimum humidity will drop into the teens Friday and Saturday as a ridge of high pressure builds into California from the Pacific Ocean. Northeast winds of 15 to 25 mph with gusts to 40 mph will surface across the mountains and below the canyons and passes of Southern California Thursday night through Friday morning. Another Pacific trough will drop down the West Coast which will bring well below normal temperatures Sunday through the middle of next week. This trough may also bring scattered showers at times with low snow levels. Precipitation totals will be light with this trough. There will be strong westerly winds over the mountains and deserts Sunday through the middle of next week.
